

Fireclay Sink

Recommended Care & Maintenance

Care and cleaning for your Fireclay sink is similar to any other type of sink you could select. Fireclay is resistant to staining and a durable choice for a kitchen which is used often if certain precautions are taken.

What NOT to do:

- Use of abrasive cleaning products or scouring pads.
- Use of dish mats which can trap dirt and soap.
- Standing water, especially if it contains anything like coffee or tea, could lead to staining.
- Placing hot pots or pans directly into the sink could cause damage to the sink.

What TO DO:

- With most sinks, in order to preserve that “new sink” look longer, a sink grid is a great option to help protect the bottom area from scuffs and nicks in the sink from daily use.
- Avoid pouring boiling water into sink. Run cold water if hot liquids are poured into sink.
- Clean your sink regularly with a soft rag or non abrasive cleaning sponge (Blue Scotch Brit Pad or similar) but avoid abrasive sponges (Green Scotch Brite, Steel Wool etc). This will help to eliminate soap scum buildup and mineral deposits.

While Fireclay is stain resistant, normal use can result in the need for a deeper cleaning of the sink. Avoid leaving heavy cleaners on the sink to soak the stained area as this can cause damage to the sink.

Fireclay Sink Warranty

Our Fireclay sinks are warranted for the lifetime of the sink for the original purchaser, as long as he/she owns the home it was originally installed in. This warranty covers manufacturers defects only.

Damage during transit, during installation, due to daily use or misuse are not covered by warranty. This includes cracks, chips, staining or any other issue not caused by workmanship or material failure.
